IT Solutions for Your Business Needs

Efficient IT Boosts Profits

Maintain a competitive edge and profitability.

Information is your most valuable asset. Collecting, managing, accessing, sharing, storing and securing data efficiently are essential for companies to grow and thrive amid fierce competition and globalization.

Ananke has successfully designed and deployed IT solutions for the unique specializations of clients ranging from local to global in every major industry.

Questions and Answers

At first, we ask more questions than we answer.

What are the goals you wish to accomplish? What changes do you hope to achieve? Ananke IT professionals will embark on an interview-based process of discovery and assessment to determine the best way to resolve issues and enhance productivity.

We will then design a solution specific to your needs and validate it with you before proceeding.

Proven Procedures

Ananke's methodology is based on the Microsoft Solutions Framework.

Ananke leverages the Microsoft Solutions Framework (MSF) to consistently deliver high-quality technology solutions on time and on budget. Using MSF, Ananke provides people and process guidance to successfully deliver business-driven technology solutions to our clients. MSF is a deliberate and disciplined approach to delivering technology projects based on a defined set of principles, models, disciplines, concepts, guidelines, and proven practices.

By using a tried and true methodology, IT solutions can be delivered with faster turnaround, smaller project teams, less risk and higher quality results. The main principles include fostering open communication, working toward a shared vision, empowering team members, establishing clear accountability and shared responsibility, focusing on delivering business value, staying agile, expecting change, investing in quality and learning from all experiences.

Opt for Best Practices

We want you to know all your options.

Implementing new infrastructure is not a decision to be taken lightly. We will make our recommendations to you based on best practices and industry standards with complete exposure to the pros and cons, as well as the potential impact of the options available.

Most of our clients come to us with a need to save time and money, improve profitability and make the process as smooth as possible. Improving data management, communication and process flow all contribute to these core objectives. Ananke's highly skilled IT experts can offer many different solutions to help your company achieve its goals.

You Set the Pace

Project initiation that fits your schedule.

We work with you to make transitions as smooth as possible. Some projects need to deploy over time to account for complexity and a wide base of users, while others need to be accelerated to meet deadlines, minimize disruptions and provide clean turnover.

Train and Maintain

Ananke will make sure your staff are ready to move forward.

Our documentation and knowledge transfer are thorough and complete, so you can move seamlessly from project inception to steady state. When possible, we prefer that your staff work alongside our IT experts for ongoing knowledge transfer. Upon completion, your personnel will be properly trained and operative.

Look to the Future

Prepare for growth and change.

When we design a solution for you, a key consideration is building in scalability to allow for tomorrow's increased demands. This could either mean installing extra capacity now or setting a schedule for technology upgrades and incremental expansions. We will help you determine the most cost-effective and efficient way to be prepared for the opportunities and challenges to come.

Ananke Smooths Bank's Transition to Active Directory

Case Study

A major bank needed help with an Active Directory deployment. Data could not be compromised, and it was important that the bank's customers not be inconvenienced during the changeover. Ananke would need to balance the inherent disparity between user/business requirements and the technical limitations of varying applications needing to be migrated.

Ananke brought partners, solutions and recommendations together to help design, purchase and deploy the new solution for Active Directory structure to replace the NDS environment throughout the bank.

The well-organized and painless migration succeeded in meeting the bank's technical and business objectives.

Ananke (ah-nang'-kee)
Greek goddess of Necessity

*Call Ananke when you
want IT that addresses
your unique situation.*

*"OUR MISSION IS TO ASSIST CLIENTS in overcoming today's
business and IT challenges, allowing a greater focus on core objectives.
Our success, as well as our clients' success, is attributed to our methodology
and our focus on People, Process, and Technology."*

— John Conway, President & CEO
